NAME
>   hd – dump files in hexadecimal format

SYNOPSIS
>   **hd** [−**s**] [−**p**] [−**h**] [−**v**] [*file...*]

DESCRIPTION
>   Write an unambiguous representation, hexadecimal bytes by default, of FILE to standard output. With more than one FILE argument, concatenate them in the listed order to form the input.
>
>   With no FILE, or when FILE is -, read standard input.

OPTIONS
>   −**s**   Prints one-line string
>
>   −**p**   Prints without spaces and characters but in lines.
>
>   −**h**   Help screen
>
>   −**v**   Program information (version, license, ...)

NOTES
>   I should write it before 30 years...
